XSP - Mono ASP.NET Session State Server

asp-state [options]

Contents [1 DESCRIPTION](#) [2 RELATED](#) [3 MORE INFORMATION](#) [4 CATEGORY](#)

DESCRIPTION

asp-state is an out of process ASP.NET session state server.

asp-state allows you to have session data saved out of process and/or on a separate computer.

To use the asp- server just modify your web.config file to use the state server:

```
<sessionState mode="StateServer"
    stateConnectionString="tcpip=server:port"
    stateNetworkTimeout="number of seconds"/>
```

And run asp-state
